Millstar is an industry leader in producing die and mold profile tooling and solid carbide tools. Millstar tools are designed for conventional profile machining, and high speed and hard milling with modern machine tools and methods.

Millstar Profile Milling Tools represent the latest in profile and contour milling technology, resulting in shorter machining and lead times, higher machining accuracy and true contouring results.

Customers include die and mold machining companies, aluminum extrusion companies, high speed machining mold makers, and aerospace and medical component industries. Insert tooling is typically used in roughing and finishing applications.

The Millstar product line is manufactured in the USA, and all tools are fully traceable. Nearly six decades of cutting tool design and manufacturing for automotive, aerospace and many other industries, as well as special design capabilities using 3-D CAD allow us to respond quickly to requests for special designs.

## Insert Overview

### The Inserts

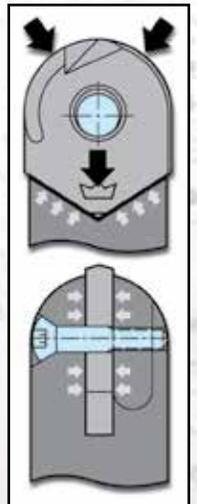

Millstar inserts are fully ground precision inserts for better chip control, faster metal removal and higher surface accuracies. They are far more accurate than pressed and O.D. sharpened inserts.

- Positive ground chipbreaker or strong negative cutting edge designs guarantee outstanding cutting performance in a wide variety of ferrous and non-ferrous materials.
- A choice of state-of-the-art insert grades, designs and tool coatings allow for optimum speed and feed rates in wet and dry machining. Reduced machining times by 25% to 60% are not uncommon.
- Economical one-piece inserts with two cutting edges are cost-effective for contour milling. True radius geometry is fully CNC-ground for higher machining accuracy and greatly reduced manual finishing and polishing time.

- Choose from side-cutting ball nose inserts with 180 degree nose radius, and popular ball nose inserts with a cutting edge covering 230 degrees for steep wall up-and-down ramping, profiling, contour milling and blending, and for a wider range of applications compared to conventional ball nose tools.
- Select from a variety of flat bottom, back draft and toroid inserts for steep or straight wall milling with long extensions on hard to reach cores, cavities or fillets. Milling with small radii prevents deflection and results in superior finishes and contour accuracies. Available with or without chipbreaker and coating in a variety of corner radii and sizes.

### Rock Solid Insert Clamping

Cutting insert clamping is highly accurate and rigid. Unique V-pocket design gives a truly positive seat for the insert and will not allow insert movement when milling with a side thrust. "Sandwiched" insert clamping with single locking screw is unsurpassed for rigidity. The advanced design of Millstar inserts eliminates heat-seizing of locking screws or insert movement due to costly locating screws or pins of less advanced design. Positive V-pocket seating eliminates mismatch when changing to fresh inserts. It also eliminates the need to program new length or diameter offsets.

### Ball Nose Inserts

#### MBT SuperFinisher Ball Nose Insert

Precision ground, harder grade, for semi-finish and finish milling. Excellent choice for unattended finish milling at small depth and high speeds and feed rates.

#### MB Ball Nose Insert

Unique cutting edge allows performance in all operations in material below 42 HRC; in semi, & finishing operations above. Significant benefits in chip evacuation. Insert geometry allows smoother cutting motion-diminishing heat build up & tool deflection, reduces vibration caused by cutting action.

#### VRBS Small Ball Nose Insert

Used for semi and finish-milling small radius or detail work, and surface milling in soft and hard steel, cast iron, aerospace and non-ferrous alloys, graphite, etc. Suitable for high speed and hard milling.

#### RB-N Ball Nose Insert

Precision ground, non-chipbreaker. Best choice for cavity, core and profile milling of pre-hard and fully hard die/mold steels, cast steels and cast iron. Strongest cutting edge design.

#### RBT Insert

Precision ground for semi-finish and finish milling. Excellent choice for unattended finish milling at small depth and high speed and feed rates.

### BS-N Ball Nose Insert

Sidecutting, non-chipbreaker. Side cutting insert used in cavity and core profiling, for blending of fillets on medium and hard materials.

### Flat Bottom Inserts

#### BDS Flat Bottom Insert

Precision ground, non-chipbreaker. Unique crossover design between flat bottom FB and back draft BD inserts. Allows straight walls with a larger step down than BD, but less cutting forces than FB; allows higher cutting speeds and feed

#### FB-R Flat Bottom Insert

Precision ground, with positive ground chipbreaker. Flat bottom insert for shoulder milling, fillet finishing and long reach angular wall finishing of softer materials

### HF (High Feed) Inserts

Millstar's new HF insert is designed for High Speed and High Feed machining. The HF is designed to run at high cutting speeds and feed rates with shallow depth of cut. The NEW curved geometry allows the chip to flow up and out of the cut quickly and smoothly allowing for the use of heavy chip loads. The geometry of the new HF insert generates cutting forces upward, toward the spindle, which helps eliminate vibration and deflection, allowing for very high chip loads. The HF insert is designed to fit into Millstar's standard flat holders, style 4 (CYF, TAF and CBCYF) making these holders more versatile than ever.

### Back Draft Inserts

#### BD-R Back Draft Insert

Precision ground, with positive ground chipbreaker and 7 degree back-taper. Used for milling of cores, cavities, fillets with straight or very steep walls of softer material.

#### VBD Small Back Draft Insert

Used for semi and finish-milling small radius or detail work, and surface milling in soft and hard steel, cast iron, aerospace and non-ferrous alloys, graphite, etc. Suitable for high speed and hard milling.

#### BD-N Back Draft Insert

Precision ground, non-chipbreaker and 7 degree backtaper. Used for milling of cores, cavities, fillets with straight or very steep walls of harder material.

#### TOBD-NF Back Draft Inserts for Non-Ferrous Materials

Millstar's new TOBD-NF insert is specifically designed for high speed and high feed roughing of Aluminum, but also has the versatility to be used for fine finishing as well. This unique cutting edge design allows the chips to flow freely up the flute allowing higher speeds and feeds. The TOBD-NF comes in diameters from 1/2 inch (12mm) up to 1 inch (25mm) and fits into our standard flat type tool holders making the holders more versatile than ever.

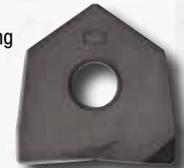

### CBN Tipped

For high speed machining or milling of high hardness materials with longer tool life and superior finishes.

### PCD Tipped

For carbon milling with longer tool life.

### Toroid

#### TO Toroid Bull Nose Insert

Precision ground, large corner radius & back taper for spiral and pocket milling, milling of pre-hard and hardened flat surfaces at higher speeds than tools with smaller corner radii. Good choice for HS milling of Aluminum

## Holder Overview

### *Indexable Milling Holder Identification System*

Measurement System	Denotes Shank Material	Shank Type	Diameter Size	Tool Body	
				Length	Diameter
Imperial	<b>CB</b>	<b>SFCY</b>	<b>0500</b>	-	<b>6.0</b> - <b>0500</b>
Metric	<b>CB</b>	<b>SFCY</b>	<b>12</b>	-	<b>150</b> - <b>12</b>
	"CB" = Carbide " " = Steel	SFCY = Cylindrical CY = Cylindrical Spike SFTA = Taper TA = Taper Spike	Imperial = Hundredths of an Inch  Metric = Millimeters		Imperial = Inches  Metric = Millimeters  Imperial = Hundredths of an Inch  Metric = Millimeters

## The Tool Holders

Cylindrical and tapered toolholders include the longest reach profiling tools available as standard catalog items. Tool holders are inherently balanced for high spindle speeds. Machine with confidence at the increased speeds and velocities dictated by modern high velocity machining. Super intelligent machine controls with high speed data transfer, rapid advances in cutting edge materials and coating technologies enable ever faster machining speeds and increased productivity. Millstar tools are designed to keep pace.

### Carbide Long Reach

Long Reach + Stiffness = High Speed Precision Milling MILLSTAR® Solid Carbide Long Reach Tool Shanks and Precision Profile Milling Inserts are designed for aggressive and high speed milling of a wide variety of materials. They provide the perfect solution for difficult milling operations in die and mold making, aerospace and many other demanding applications requiring fast metal removal rates, precision tolerances and smoothest surface finishes.

User benefits:

- Increased stiffness – for more aggressive metal removal and long reach, deep milling.
- Large cutting insert choice – the variety of available cutting geometry, tool coatings, and insert shapes and sizes assures best milling results at lowest machining cost per part.
- Minimized deflection – to machine closer to net shape & tight tolerance.
- Vibration reducing – for smoother surface finish, improved tool life, longer spindle life.

- Minimized cutter run out – improved milling results in soft to fully hardened (to 65 HRc) materials.
- Smaller shank to cutter diameter – several sizes have full-length side clearance to machine straight walls.
- Safe high speed milling – highest tool stiffness and least deflection when compared with steel and heavy metal tool shanks result in process reliability and highest safety for operator and machine.
- Shank diameters (h6) – all tool shanks are heat shrink-fit tool adapter compatible.

### Button Cutter

High Performance Milling from Heavy Roughing to Fine Finishing.

Millstar face mills are equally useful on newer high velocity machines and older slower equipment and will optimize milling performance of all your machine tools. The hardened tool bodies can be run at aggressive spindle speed and feed rates, when used with Millstar's precision ground, strong and thick, round inserts with proven hard, high performance TLN or HSN tool coating.

The tools provide for precision finish results, minimal tool deflection and run-out. Excellent milling results can be achieved in roughing, semi finishing and fine finishing in Z-level, profiling or raster cuts, as well as in linear or circular interpolation milling or ramping.

The tools may be used with coolant, but we recommend dry, mist or MQL (minimum quantity lubrication) milling with strong air blast when high speed or hard machining steel, particularly in the higher hardness range (> 45HRc / 425 HBN). Please refer to FAQs (frequently asked questions) about milling on our website [www.millstar.com](http://www.millstar.com).

## Profile Milling Program Tools

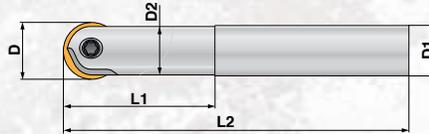

Millstar Profile Milling Tools represent the latest in profile and contour milling technology, providing the competitive edge of shorter machining and lead times, and the advantages of higher machining accuracy and true contouring results.

### The Millstar Advantage

<b>Better surface finishes</b>	=	<b>Reduced finishing work</b>
<b>Faster run &amp; feed speed</b>	=	<b>Reduced machining time</b>
<b>Increased tool life</b>	=	<b>Reduced tool changes &amp; cost</b>
<b>Accurate and consistent milling</b>	=	<b>Reduced manual rework</b>
<b>Balanced milling action, two flute efficiency</b>	=	<b>Greatly increased metal removal productivity</b>

TOBD-NF	Number	D	L	R	XRN	TLN	HSN	Description	
	TOBD-0500-NF	0.500	0.377	0.125				Millstar inserts designed for high speed high feed roughing of Aluminum, but also has the versatility to be used for fine finishing as well.	
	TOBD-0625-NF	0.625	0.433	0.125					
	TOBD-0750-NF	0.750	0.518	0.125					
	TOBD-1000-NF	1.000	0.716	0.125					

### Radius Ordering Numbers:

For .015 use ordering # .015 • For 1/32" use ordering # 02 1/16" use ordering # 04

For 1/8" use ordering # 08

Example: 1/2" BDS-0500N-04-HSN

### NA

Non-coated grade.

### XRN

Multi-layer hybrid coating of AlCrN. This coating has very good heat resistance and also a low friction coefficient. The XRN coating is designed for use in HSM of un-heat treated softer materials such as Titanium, Inconel, Stainless Steels and other gummy materials that require the use of liquid coolant.

### HSN

Millstar's new coating is a multi-layer hybrid Nano coating. This new coating has very good heat resistance and high hardness. The HSN coating is designed for use in HSM of Heat Treated materials up to 72 HRC.

### ALTiN-EXALON (TLN)

Titanium Aluminum Nitride advanced PVD coating. A special, improved ALTiN coating approaching surface hardness of CBN on a tough substrate. Recommended for tough and hard metal machining applications.

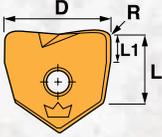

### DMD

Diamond coating. Custom coating for cutting non-ferrous, non-metallic and very abrasive materials at highly elevated speeds. Use on copper, bronze, brass, aluminum-silicon alloys, carbon graphite, solid and fiber-reinforced plastics, ceramics and composite materials.

Custom tool coatings for specific applications are available by request.

## BDS Series in PCD and CBN Tipped

### Back Draft

BDS	Tool Ordering Number	Dimensions				Grade			Description
		D	L	R	L1	XRN	TLN	HSN	
	BDS-0375-N	0.375	0.340	1/32,1/16	0.125	•	•	•	Precision ground with unique crossover design between flat bottom FB and back draft BD inserts. Allows straight walls with a larger step down than BD. Allows higher cutting speeds and feeds.
	BDS-0500-N	0.500	0.380	015,1/32,1/16	0.125	•	•	•	
	BDS-0625-N	0.625	0.457	1/32,1/16	0.125	•	•	•	
	BDS-0750-N	0.750	0.540	1/32,1/16,1/8	0.125	•	•	•	
	BDS-1000-N	1.000	0.740	1/32,1/16,1/8	0.125	•	•	•	

### PCD Tipped

For carbon milling with longer tool life

### CBN Tipped

For high speed machining or milling of high hardness materials with longer tool life and superior finishes.

**NEW!**  
Higher cutting speeds and feeds with new Back Draft Tools

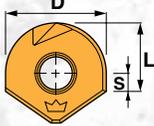

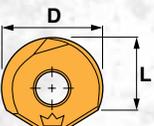

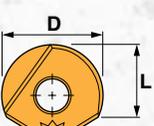

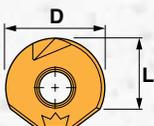

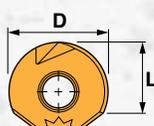

### Radius Ordering Numbers:

For .015 use ordering # .015 • For 1/32" use ordering # 02 1/16" use ordering # 04  
For 1/8" use ordering # 08

Example: 1/2" BDS-0500N-04-PCD or CBN

# Choosing Cutting Parameters/Calculating Cutting Speed and Feed – INCH

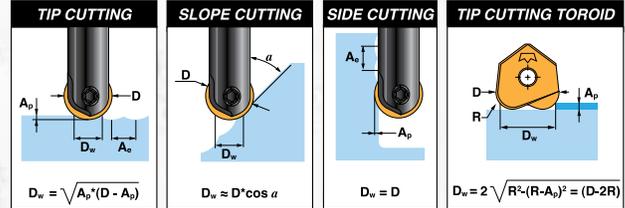

## 1. Find the Cutting Speed & Feed $f_n$

Find SFM and  $f_n$  range in Table 1 or Table 2 at left. Choose the average value for SFM and the lower value for feed in the range.

## 2. Compute the $D_w$

In order to compute the RPM value of the spindle it is necessary to determine the  $D_w$  which is the effective engaged tool diameter. The  $D_w$  depends on the geometry of the inserts (ball nose or toroid) and the relative position of the tool against the working piece surface.

Example calculation is of  $D_w$  is presented to the right.

## 3. Calculate Spindle Speed

Use the formula:  $N = \text{SFM} \times 3.82 (\div D_w)$

**Table 3 - Working Diameter For Ball Nose Tools**

ØD	0.250	0.312	0.375	0.500	0.625	0.750	1.000	1.250
Depth of cut	Dw Working Diameter (inch) Actual effective cutting diameter

0.250					1.000	1.237
0.312						1.250

## 4. Calculate the Table Feed $V_f$ (m/min)

Use the formula:  $V_f = N * f_n * K_f$ .  $K_f$  is the feed rate multiplier coefficient taking into consideration that chip load is less than theoretical value. Take the value of  $K_f$  from Table 5 or Table 6.

**Table 5 - Feed Rate Multiplier For Ball Nose Inserts**

Insert Diameter "D"	0.250	0.312	0.375	0.500	0.625	0.750	1.000	1.250

0.250					1.000	1.020
0.312						1.000

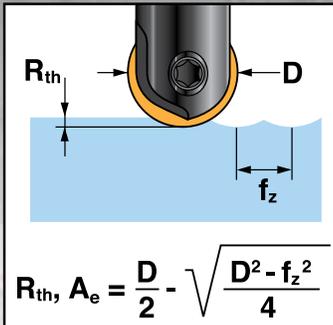

## Verify Surface Roughness ( $R_{th}$ )

1. Decreasing the  $A_e$  and feed by half will improve surface roughness by 4 times.
2. Using  $f_z = A_e$  in most cases is the best option.

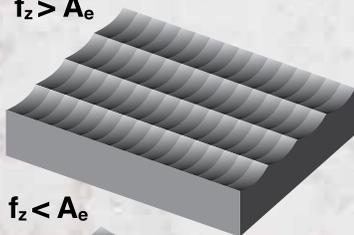

### Surface Roughness Step-Over

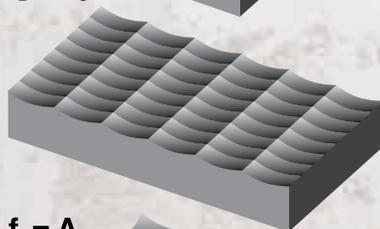

### Surface Roughness Feed Dir

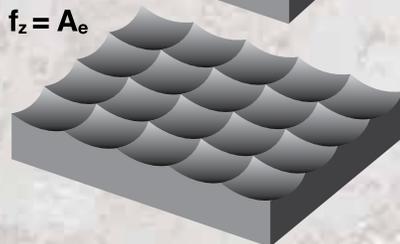

$f_z > A_e$

$f_z < A_e$

$f_z = A_e$

# Feed & Speed Calculations

## Nomenclature

D = cutter/insert diameter	fz = feed per tooth	ae = width of cut, step-over	R <sub>th,ae</sub> = theoretical surface roughness in step-over direction
Dw = effective cutter diameter	Fz <sub>cor</sub> = feed/tooth, chip thinning corrected	R = insert radius	R <sub>th,fz</sub> = theoretical surface roughness in feed direction
z = number of teeth	CF = centerline feed, helical interpolation	SFM = surface feet per minute	B = bore dia., helical interpolation
Vc = cutting speed	x = multiplier symbol (inch)	RPM = revolutions per minute	IC = inscribed circle (2 x R)
n = number of revolutions per minute	• = multiplier symbol (metric)	IPM = inch per minute, feed rate	Q = metal removal rate
Vf = feed rate, or table feed	ap = axial depth of cut	π = 3.14159...circle, circumference:dia. ratio	
f = feed per revolution			

## Cutting Speed

To find the SFM of a cutter:

$$SFM = \frac{\pi \times D \times RPM}{12} = 0.262 \times D \times RPM$$

**Example:**

To find the SFM of a 3/4" Ø cutter rotating at 6000 RPM:

$$0.262 \times D \times RPM = 0.262 \times 0.75 \times 6000 = 1179 \text{ SFM}$$

**Metric Formula:**

$$v_c = \frac{n \cdot \pi \cdot Dw}{1000} = \text{m / minute}$$

## Feed Per Tooth

To find the feed per tooth of a cutter:

$$FZ = \frac{IPM}{z \times RPM}$$

**Example**

To find the feed per tooth of a two flute cutter rotating at 10000 RPM with a table travel of 240 inches per minute:

$$FZ = \frac{240}{2 \times 10\,000} = 0.012 \text{ FZ}$$

**Metric Formula:**

$$f = \frac{v_f}{n \cdot z} = \text{mm / tooth}$$

## Effective Cutting Diameter, Ball Nose

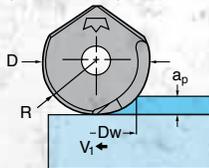

To find the effective cutter Ø of a ball nose tool:

$$Dw = 2 \times \sqrt{R^2 - (R - a_p)^2}$$

**Example**

To find the effective cutter diameter engaged of a 1.0" Ø ball nose tool cutting at 0.040" depth of cut:

$$Dw = 2 \times \sqrt{0.5^2 - (0.5 - 0.040)^2} = 0.392"$$

**Metric Formula:**

use same formula in mm.

## Surface Roughness, Step-Over

To find the surface roughness in step-over direction:

$$R_{th,ae} = \frac{D}{2} - \sqrt{\frac{D^2 - a_e^2}{4}}$$

**Example**

To find the theoretical roughness of a 3/4" Ø ball nose tool in step-over direction of the cut (peak-to-valley or cusp height), with a 0.030 step-over value:

$$R_{th,ae} = \frac{.75}{2} - \sqrt{\frac{.75^2 - .03^2}{4}} = 0.0003"$$

**Metric Formula:** use same formula in mm.

## Spindle Speed

To find the RPM of a cutter:

$$RPM = \frac{12 \times SFM}{\pi \times D} = \frac{3.82 \times SFM}{D}$$

**Example**

To find the RPM of a 1/2" Ø cutter rotating at 800 SFM:

$$RPM = \frac{3.82 \times 800}{.500} = 6112 \text{ RPM}$$

**Metric Formula:**

$$n = \frac{v_c \cdot 1000}{\pi \cdot Dw} = \text{min}^{-1}$$

## Feed Rate or Table Feed

To find the feed (table feed) in inches per minute:

$$IPM = RPM \times f_z \times z$$

**Example**

To find the feed per tooth of a two flute cutter rotating at 5000 RPM with a feed per tooth of 0.006:

$$IPM = 5000 \times 0.006 \times 2 = 60 \text{ IPM}$$

**Metric Formula:**

$$v_f = n \cdot f_z \cdot z = \text{mm / minute}$$

## Effective Cutting Diameter, Toroid

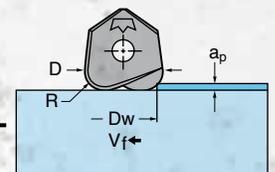

To find the effective cutter Ø of a Toroid bull nose tool:

$$Dw = 2 \times \sqrt{R^2 - (R - a_p)^2} + (D - 2R)$$

**Example**

To find the effective cutter diameter engaged of a 3/4" Ø Toroid bull nose tool cutting at 0.100" depth of cut:

$$Dw = 2 \times \sqrt{.1875^2 - (.1875 - .1)^2} + (.75 - (2 \times .1875)) = .707$$

**Metric Formula:** use same formula in mm.

## Surface Roughness, Feed Direction

To find the surface roughness in feed direction:

$$R_{th,fz} = \frac{D}{2} - \sqrt{\frac{D^2 - f_z^2}{4}}$$

**Example**

To find the theoretical roughness of a 3/4" Ø ball nose tool in feed direction of the cut (peak-to-valley or cusp height), with a 0.005 feed per tooth value:

$$R_{th,fz} = \frac{.75}{2} - \sqrt{\frac{.75^2 - .005^2}{4}} = 0.000008"$$

**Metric Formula:** use same formula in mm.

## ***Copy Milling Program Tools***

Millstar face mills are equally useful on newer high velocity machines and older slower equipment and will optimize milling performance of all your machine tools. The hardened tool bodies can be run at aggressive spindle speed and feed rates, when used with Millstar's precision ground, strong and thick, round inserts with proven hard, high performance TLN and HSN tool coatings.

The tools provide for precision finish results, minimal tool deflection and run-out. Excellent milling results can be achieved in roughing, semi finishing and fine finishing in Z-level, profiling or raster cuts, as well as in linear or circular interpolation milling or ramping.

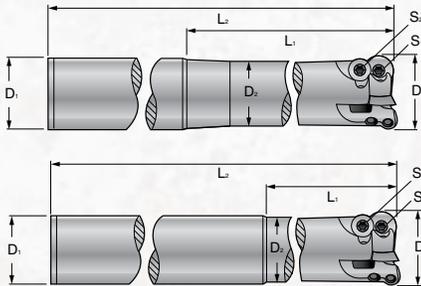

The tools may be used with coolant, but we recommend dry, mist or MQL (minimum quantity lubrication) milling with strong air blast when high speed or hard machining steel, particularly in the higher hardness range (> 45HRc / 425 HBN).

### Cutting Conditions: Recommended Feed $f_z$ (in./tooth)

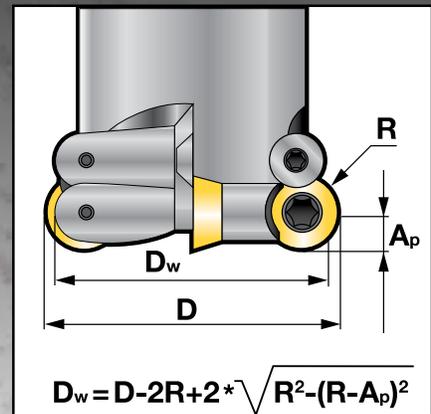

Operation	$A_p$										
	IC	0.012	0.02	0.028	0.031	0.04	0.05	0.08	0.12	0.16	0.2
Light	10	0.012	0.008	0.008	0.007	0.006	0	0	0	0	0
	12	0.015	0.012	0.010	0.012	0.008	0.006	0	0	0	0
	16	0.016	0.015	0.012	0.012	0.009	0.008	0.007	0	0	0
Rough	10	0	0	0	0	0.012	0.009	0.008	0.007	0.006	0.005
	12	0	0	0	0	0.016	0.014	0.012	0.011	0.009	0.008
	16	0	0	0	0	0.020	0.017	0.015	0.012	0.011	0.010

The "fz" indicated above is for an overhang of 3xD. The values are calculated based on the recommended thickness of the chip "hm".

LIGHT:  $A_e$  up to 25% of the Diameter of the Tool "D".

ROUGH:  $A_e$  up to 75% of the Diameter of the Tool "D".

In order to compute the RPM value of the spindle it is necessary to determine the  $D_w$  which is the effective engaged tool diameter. The  $D_w$  depends on the geometry of the inserts (ball nose or toroid) and of the relative position of the tool against the working piece surface. A formula is presented.

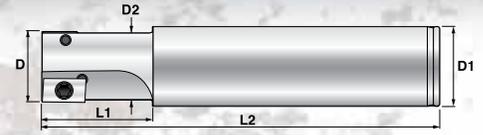

$$D_w = D - 2R + 2 * \sqrt{R^2 - (R - A_p)^2}$$

## ***High Feed Indexable Milling Program Tools***

With new five- and six-axis CNC grinding technology, Millstar has been able to create some of the most sophisticated and complex geometries in use today. With this increase in grinding technology, high-feed tooling has been reborn. The definition of high-feed geometry is producing a positive cutting edge out of a series of continuous radii with no tangent point to induce wear. The geometry must allow the chip to flow up and out of the cut quickly and smoothly. This cutting motion allows the use of heavy chip loads to achieve very high feed rates.

- For Slant Milling or Helical Interpolation decrease the recommended feed by 30%.
- In case of Helical Interpolation do not exceed the max Ap/revolution.
- For Plunging use 50% of recommended feed only.
- For insert HFCI 09T3 the max Ae is: 0.200
- For insert HFCI 1204 the max Ae is: 0.250

The values of “n” and “Vf” in the tables on the following pages are computed. In the application, use the closest (up side) speed from the range of the machine tool.

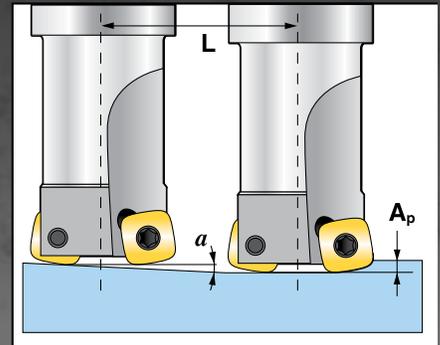

The cutting parameters have to be adjusted accordingly to the rigidity of the machine-tool and working piece.

In case of hard steel alloy of 50-55 HRC decrease by 30% the Ap, Vc and feed.

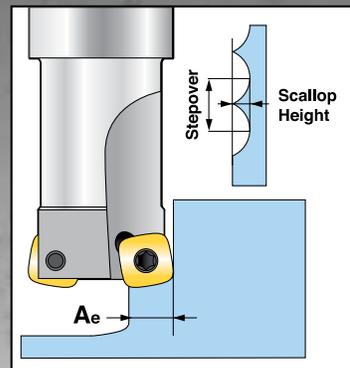

## Helical Interpolation

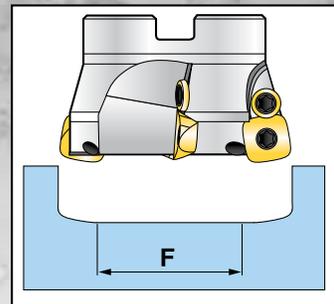

## Slant Milling

## Plunge Milling

## Facing - Max Flat

## ***High Performance Solid Carbide End Mills***

Millstar offers a wide variety of Solid Carbide End Mills that are designed for high performance machining. Our impressive lineup features a large selection of High Feed Solid Carbide End Mills that achieve the highest performance in the industry. Our End Mills can be used in a broad spectrum of materials such as hardened steels, soft steels, titanium, cobalt chrome and many more.

**NA**

Non-coated grade.

**HSN**

Millstar's new coating is a multi-layer hybrid Nano coating. This new coating has very good heat resistance and high hardness. The HSN coating is designed for use in HSM of Heat Treated materials up to 72 HRC.

**ALTiN-EXALON  
(TLN) (EX)**

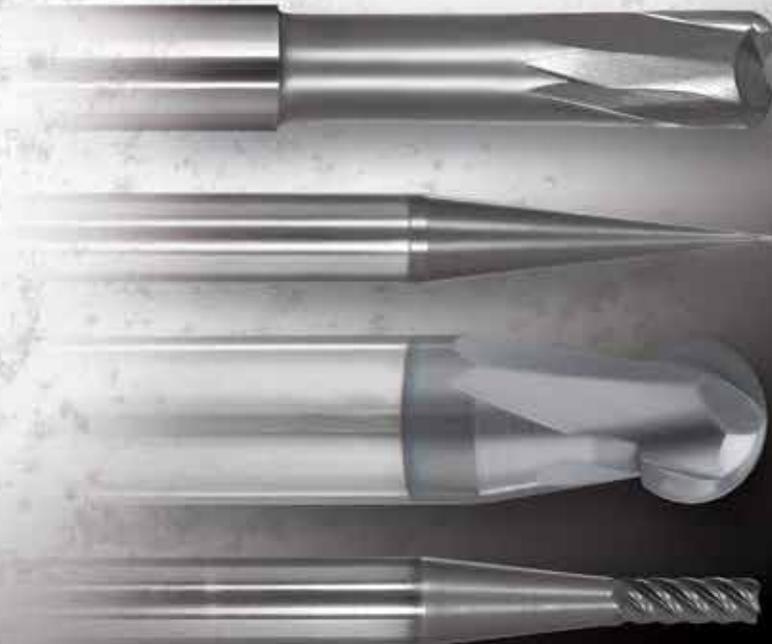

Titanium Aluminum Nitride advanced PVD coating. A special, improved ALTiN coating approaching surface hardness of CBN on a tough substrate. Recommended for tough and hard metal machining applications.

Custom tool coatings for specific applications are available by request.

**Solid Carbide End Mills**

Millstar's new High Performance and ultra-precise solid carbide end mills were designed for high speed, high velocity and hard steel milling. Designed with specially selected premium sub-micron carbide substrate, special tool geometry and proprietary heat-defying EXALON tool coating, these tools made in the United States, and are competitively priced. Ideal choices for accurately and aggressively machining products in:

- **Mold and die making:** injection molds, glass molds, forging dies, extrusion dies.
- **Aerospace:** engine, landing gear and tail hook components, structural components, blisks, airfoil machining and forging dies, helicopter rotor components.
- **Power generating:** turbine blades and other components.
- **Medical:** hip and knee replacement joints, surgical instruments, medical device molds.
- **Automotive:** stamping dies, wheel and tire molds, ball joints, cam shaft machining, racing engine details, bumper and other injection molds, die cast dies, forging dies for crank and cam shafts, connecting rods, steering knuckles and yokes.
- **Consumer products:** molds for cake forms and baking dishes, cell phones, lawn chairs, trash cans, toys, bottles, recyclable cutlery and dishes, jewelry, golf clubs, safety helmets, computer and accessory housings.

## Solid Carbide End Mill Program - High Feed

## Solid Carbide End Mill Program - Square Nose

Square nose tools Series EMS / EIS with sharp corner or square nose tools Series EIB / EMB with corner radius, all with medium-high helix and strong cutting edges and tool body, work extremely well in materials up to 65HRc as well as in softer materials.

### EIS - Square End

## Solid Carbide End Mill Program - Ball Nose

Ball nose tools Series BI / BM are designed with two flutes and special nose geometry for true High Speed and Hard Material milling up to 68 HRC. Ball nose tools are the most aggressive tools for these applications. We will be glad to share our proven approach to improving your machining results.

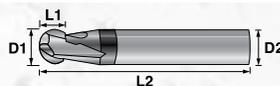

### BI - Ball Nose

Tool Ordering No.	Cutter Diameter (D1) tol. +0 / -0.0004	Ball Radius	Shank Diameter (D2)	No. of Flutes	Neck Diameter	Cutting Length (L1)	Nose Taper	Overall Length (L2)

## Solid Carbide End Mill Program - Toroid

The Toroid Series TOI with large corner radius and slight back taper is a Millstar innovative addition. It is very useful in I.D. and O.D. Z-level and spiral milling at constant tool pressure, pocket milling, and milling of pre-hard and hardened flat surfaces at higher speeds than tools with smaller or sharp corner radii.

### TOI - Toroid

Tool Ordering No.	Cutter Diameter (D1) tol. +0 / -0.0004	Corner Radius	Shank Diameter (D2)	No. of Flutes	Neck Diameter	Cutting Length (L1)	Nose Taper	Overall Length (L2)	Neck Length (L3)

Metric	<b>HM</b>	<b>32mm</b>	<b>105</b>	<b>BT40</b>

## ***SD Collet Chucks***

CAT, BT and HSK styles:

- SD design increases gripping power/torque over the traditional ER collet system with 4° per side angle contact.
- Maximum runout (0.007mm @ 4XD) increases accuracy and tool life while minimizing rework. Consistent repeatability shortens set-up time and improves productivity.
- Off the shelf balance specifications of G6.3 at 20,000 rpm provides confidence in high speed machining applications and high accuracy requirements.
- Durable, case hardened chucks.

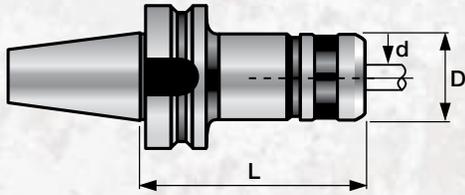

## ***HM Milling Chucks***

CAT, BT and HSK styles:

- More efficient & effective roughing operations.
- Exceptional rigidity under side loads.
- Strong chucking torque eliminates cutting tool slip and maximizes gripping power.
- Decreased vibration extends tool life and improves surface finishes for secondary operations.
- Superior concentric positioning improves accuracy and allows closer to net shape machining.
- Very competitively priced.

Millstar is an industry leader in producing die and mold profile tooling and solid carbide tools. Millstar tools are designed for conventional profile machining, and high speed and hard milling with modern machine tools and methods.

Millstar Profile Milling Tools represent the latest in profile and contour milling technology, resulting in shorter machining and lead times, higher machining accuracy and true contouring results.

Customers include die and mold machining companies, aluminum extrusion companies, high speed machining mold makers, and aerospace and medical component industries. Insert tooling is typically used in roughing and finishing applications.

The Millstar product line is manufactured in the USA, and all tools are fully traceable. Nearly six decades of cutting tool design and manufacturing for automotive, aerospace and many other industries, as well as special design capabilities using 3-D CAD allow us to respond quickly to requests for special designs.

## Insert Overview

### The Inserts

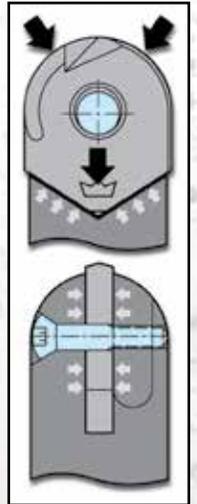

Millstar inserts are fully ground precision inserts for better chip control, faster metal removal and higher surface accuracies. They are far more accurate than pressed and O.D. sharpened inserts.

- Positive ground chipbreaker or strong negative cutting edge designs guarantee outstanding cutting performance in a wide variety of ferrous and non-ferrous materials.
- A choice of state-of-the-art insert grades, designs and tool coatings allow for optimum speed and feed rates in wet and dry machining. Reduced machining times by 25% to 60% are not uncommon.
- Economical one-piece inserts with two cutting edges are cost-effective for contour milling. True radius geometry is fully CNC-ground for higher machining accuracy and greatly reduced manual finishing and polishing time.

- Choose from side-cutting ball nose inserts with 180 degree nose radius, and popular ball nose inserts with a cutting edge covering 230 degrees for steep wall up-and-down ramping, profiling, contour milling and blending, and for a wider range of applications compared to conventional ball nose tools.
- Select from a variety of flat bottom, back draft and toroid inserts for steep or straight wall milling with long extensions on hard to reach cores, cavities or fillets. Milling with small radii prevents deflection and results in superior finishes and contour accuracies. Available with or without chipbreaker and coating in a variety of corner radii and sizes.

### Rock Solid Insert Clamping

Cutting insert clamping is highly accurate and rigid. Unique V-pocket design gives a truly positive seat for the insert and will not allow insert movement when milling with a side thrust. "Sandwiched" insert clamping with single locking screw is unsurpassed for rigidity. The advanced design of Millstar inserts eliminates heat-seizing of locking screws or insert movement due to costly locating screws or pins of less advanced design. Positive V-pocket seating eliminates mismatch when changing to fresh inserts. It also eliminates the need to program new length or diameter offsets.

### Ball Nose Inserts

#### MBT SuperFinisher Ball Nose Insert

Precision ground, harder grade, for semi-finish and finish milling. Excellent choice for unattended finish milling at small depth and high speeds and feed rates.

#### MB Ball Nose Insert

Unique cutting edge allows performance in all operations in material below 42 HRC; in semi, & finishing operations above. Significant benefits in chip evacuation. Insert geometry allows smoother cutting motion-diminishing heat build up & tool deflection, reduces vibration caused by cutting action.

#### VRBS Small Ball Nose Insert

Used for semi and finish-milling small radius or detail work, and surface milling in soft and hard steel, cast iron, aerospace and non-ferrous alloys, graphite, etc. Suitable for high speed and hard milling.

#### RB-N Ball Nose Insert

Precision ground, non-chipbreaker. Best choice for cavity, core and profile milling of pre-hard and fully hard die/mold steels, cast steels and cast iron. Strongest cutting edge design.

#### RBT Insert

Precision ground for semi-finish and finish milling. Excellent choice for unattended finish milling at small depth and high speed and feed rates.

### BS-N Ball Nose Insert

Sidecutting, non-chipbreaker. Side cutting insert used in cavity and core profiling, for blending of fillets on medium and hard materials.

### Flat Bottom Inserts

#### BDS Flat Bottom Insert

Precision ground, non-chipbreaker. Unique crossover design between flat bottom FB and back draft BD inserts. Allows straight walls with a larger step down than BD, but less cutting forces than FB; allows higher cutting speeds and feed

#### FB-R Flat Bottom Insert

Precision ground, with positive ground chipbreaker. Flat bottom insert for shoulder milling, fillet finishing and long reach angular wall finishing of softer materials

### HF (High Feed) Inserts

Millstar's new HF insert is designed for High Speed and High Feed machining. The HF is designed to run at high cutting speeds and feed rates with shallow depth of cut. The NEW curved geometry allows the chip to flow up and out of the cut quickly and smoothly allowing for the use of heavy chip loads. The geometry of the new HF insert generates cutting forces upward, toward the spindle, which helps eliminate vibration and deflection, allowing for very high chip loads. The HF insert is designed to fit into Millstar's standard flat holders, style 4 (CYF, TAF and CBCYF) making these holders more versatile than ever.

### Back Draft Inserts

#### BD-R Back Draft Insert

Precision ground, with positive ground chipbreaker and 7 degree back-taper. Used for milling of cores, cavities, fillets with straight or very steep walls of softer material.

#### VBD Small Back Draft Insert

Used for semi and finish-milling small radius or detail work, and surface milling in soft and hard steel, cast iron, aerospace and non-ferrous alloys, aluminum alloys, graphite, etc. Suitable for high speed and hard milling.

#### BD-N Back Draft Insert

Precision ground, non-chipbreaker and 7 degree backtaper. Used for milling of cores, cavities, fillets with straight or very steep walls of harder material.

#### TOBD-NF Back Draft Inserts for Non-Ferrous Materials

Millstar's new TOBD-NF insert is specifically designed for high speed and high feed roughing of Aluminum, but also has the versatility to be used for fine finishing as well. This unique cutting edge design allows the chips to flow freely up the flute allowing higher speeds and feeds. The TOBD-NF comes in diameters from 1/2 inch (12mm) up to 1 inch (25mm) and fits into our standard flat type tool holders making the holders more versatile than ever.

### CBN Tipped

For high speed machining or milling of high hardness materials with longer tool life and superior finishes.

### PCD Tipped

For carbon milling with longer tool life.

### Toroid

#### TO Toroid Bull Nose Insert

Precision ground, large corner radius & back taper for spiral and pocket milling, milling of pre-hard and hardened flat surfaces at higher speeds than tools with smaller corner radii. Good choice for HS milling of Aluminum

## Profile Milling Program Tools

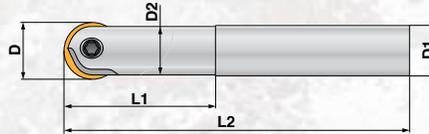

Millstar Profile Milling Tools represent the latest in profile and contour milling technology, providing the competitive edge of shorter machining and lead times, and the advantages of higher machining accuracy and true contouring results.

### The Millstar Advantage

<b>Better surface finishes</b>	=	<b>Reduced finishing work</b>
<b>Faster run &amp; feed speed</b>	=	<b>Reduced machining time</b>
<b>Increased tool life</b>	=	<b>Reduced tool changes &amp; cost</b>
<b>Accurate and consistent milling</b>	=	<b>Reduced manual rework</b>
<b>Balanced milling action, two flute efficiency</b>	=	<b>Greatly increased metal removal productivity</b>

## Profile Milling Inserts

### Small Ball Nose & Back Draft Inserts

VRBS	Tool Ordering Number	Dimensions			Grade			Description
		D	L	R	XRN	TLN	HSN	
	VRBS-6	6	8,10	3	•	•	•	Used for semi and finish-milling small radius or detail work, and surface milling in soft and hard steel, cast iron, aerospace and non-ferrous alloys, graphite, etc. Suitable for high speed and hard milling.
	VRBS-8	8	4,50	4	•	•	•	
VBD	Tool Ordering Number	Dimensions			Grade			Description
		D	L	R	XRN	TLN	HSN	
	VBD-06	6	8,6	0,1/0,4	•	•	•	Used for semi and finish-milling small radius or detail work, and surface milling in soft and hard steel, cast iron, aerospace and non-ferrous alloys, graphite, etc. Suitable for high speed and hard milling.
	VBD-08	8	5	0,1/0,4	•	•	•	

### Metric High Feed Inserts

HF	Tool Ordering Number	Dimensions			Grade			Description
		D	L	PR	XRN	TLN	HSN	
	HF-10	10	3	1,00	•	•	•	Millstar HF insert is designed for High feed and High speed machining. It runs at high cutting speed and feed rates with shallow depth of cut. It allows the chip to flow up and out of the cut quickly. It allows heavy chip loads.
	HF-12	12	4	1,43	•	•	•	
	HF-16	16	5	1,94	•	•	•	
	HF-20	20	6	2,26	•	•	•	
	HF-25	25	7	2,82	•	•	•

## Copy Milling Inserts

### NA

Non-coated grade.

### XRN

Multi-layer hybrid coating of AlCrN. This coating has very good heat resistance and also a low friction coefficient. The XRN coating is designed for use in HSM of un-heat treated softer materials such as Titanium, Inconel, Stainless Steels and other gummy materials that require the use of liquid coolant.

### HSN

Millstar's new coating is a multi-layer hybrid Nano coating. This new coating has very good heat resistance and high hardness. The HSN coating is designed for use in HSM of Heat Treated materials up to 72 HRC.

### ALTiN-EXALON (TLN)

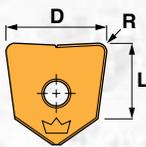

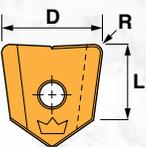

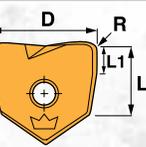

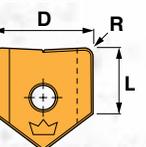

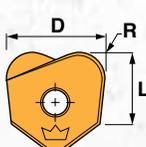

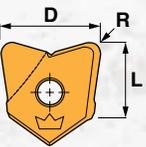

Titanium Aluminum Nitride advanced PVD coating. A special, improved ALTiN coating approaching surface hardness of CBN on a tough substrate. Recommended for tough and hard metal machining applications.

### DMD

Diamond coating. Custom coating for cutting non-ferrous, non-metallic and very abrasive materials at highly elevated speeds. Use on copper, bronze, brass, aluminum-silicon alloys, carbon graphite, solid and fiber-reinforced plastics, ceramics and composite materials.

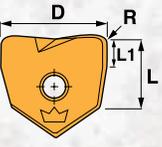

Custom tool coatings for specific applications are available by request.

### Flat Bottom, Back Draft, Toroid

BD-N	Tool Ordering Number	Dimensions			Grade			Description	
		D	L	R	XRN	TLN	HSN		
	BD-10-N	10	8,5	0,5/0,8/1,0	•	•	•	Precision ground with 7° back taper. Used for milling of cores, cavities, fillets with straight or very steep walls of harder materials.	
	BD-12-N	12	9,95	0,5/1,0/2,0	•	•	•		
	BD-16-N	16	11,55	0,5/1,0/1,3/2,0/3,0	•	•	•

	TO-30	30	22,15	7,5	•	•	•		
	TO-32	32	21,95	8,0	•	•	•		
TOBD-NF	Number	D	L	R	XRN	TLN	HSN	Description	
	TOBD-12-NF	12	9,2	3,0	•	•	•	Millstar inserts designed for high speed high feed roughing of Aluminum, but also has the versatility to be used for fine finishing as well.	
	TOBD-16-NF	16	11,25	3,0	•	•	•		
	TOBD-20-NF	20	13,15	3,0	•	•	•		
	TOBD-25-NF	25	18,25	3,0	•	•	•		

## BDS Series in PCD and CBN Tipped

### Back Draft

BDS	Tool Ordering Number	Dimensions				Grade			Description
		D	L	R	L1	XRN	TLN	HSN	
	BDS-10-N	10	8,5	0,1/0,8/1,0	3	•	•	•	Precision ground with unique crossover design between flat bottom FB and back draft BD inserts. Allows straight walls with a larger step down than BD. Allows higher cutting speeds and feeds.
	BDS-12-N	12	9,95	0,1/1	3	•	•	•	
	BDS-16-N	16	11,55	0,1/1/1,3	3	•	•	•	
	BDS-20-N	20	13,35	0,1/1/1,6	3	•	•	•	
	BDS-25-N	25	19,95	1/2	3	•	•	•	

### PCD Tipped

For carbon milling with longer tool life

### CBN Tipped

For high speed machining or milling of high hardness materials with longer tool life and superior finishes.

**NEW!**

Higher cutting speeds and feeds with new Back Draft Tools

### Radius Ordering Numbers:

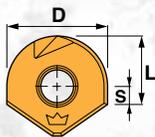

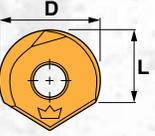

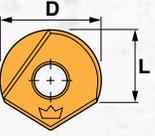

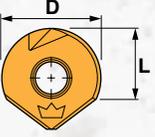

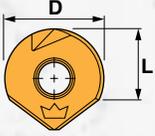

For .015 use ordering # .015 • For 1/32" use ordering # 02 1/16" use ordering # 04

For 1/8" use ordering # 08

Example: 1/2" BDS-0500N-04-PCD or CBN

## Ball Nose Inserts

BS-N	Tool Ordering Number	Dimensions			Grade			Description
		D	L	S	XRN	TLN	HSN	
	BS-10-N	10	9,50	3,65	•	•	•	Sidecutting, non-chipbreaker. Side cutting insert used in cavity and core profiling, for blending of fillets on medium and hard materials.
	BS-12-N	12	8,80	2,90	•	•	•	
	BS-16-N	16	10,70	2,85	•	•	•	
	BS-20-N	20	12,75	2,85	•	•	•	
	BS-25-N	25	17,20	4,85	•	•	•	
	BS-30-N	30	20,00	5,10	•	•	•	
	BS-32-N	32	21,00	5,30	•	•	•	
MB	Number	D	L	XRN	TLN	HSN	Description	
	MB-10	10	8,65	•	•	•	Unique cutting edge allows performance in all operations in material below 42 HRC; in semi- & finishing operations above. Significant benefits in chip evacuation. Insert geometry allows smoother cutting motion-diminishing heat build up & tool deflection, reduces vibration caused by cutting action.	
	MB-12	12	9,20	•	•	•		
	MB-16	16	11,25	•	•	•		
	MB-20	20	13,15	•	•	•		
	MB-25	25	18,25	•	•	•		
	MB-30	30	22,15	•	•	•		
	MB-32	32	21,95	•	•	•		
MBT	Number	D	L	XRN	TLN	HSN	Description	
	MBT-10	10	8,65	•	•	•	Precision ground, harder grade, for semi-finish and finish milling. Excellent choice for unattended finish milling at small depth and high speeds and feed rates.	
	MBT-12	12	9,20	•	•	•		
	MBT-16	16	11,25	•	•	•		
	MBT-20	20	13,15	•	•	•		
	MBT-25	25	18,25	•	•	•		
	MBT-30	30	22,15	•	•	•		
	MBT-32	32	21,95	•	•	•		
RB-N	Number	D	L	XRN	TLN	HSN	Description	
	RB-10-N	10	9,50	•	•	•	Precision ground, non-chipbreaker. Best choice for cavity, core and profile milling of pre-hard and fully hard die/mold steels, cast steels and cast iron. Strongest cutting edge design.	
	RB-12-N	12	9,20	•	•	•		
	RB-14-N	14	9,45	•	•	•		
	RB-16-N	16	11,25	•	•	•		
	RB-20-N	20	13,15	•	•	•		
	RB-22-N	22	17,45	•	•	•		
	RB-25-N	25	18,25	•	•	•		
	RB-30-N	30	22,15	•	•	•		
	RB-32-N	32	21,95	•	•	•		
	RBT	Number	D	L	XRN	TLN		HSN
	RB-10-T	10	8,65			•	Precision ground for semi-finish and finish milling. Excellent choice for unattended finish milling at small depth and high speed and feed rates.	
	RB-12-T	12	9,20			•		
	RB-16-T	16	11,25			•		
	RB-20-T	20	13,15			•		
	RB-25-T	25	18,25			•		
	RB-30-T	30	22,15			•		
	RB-32-T	32	21,95			•		

### NA

Non-coated grade.

### XRN

Multi-layer hybrid coating of AlCrN. This coating has very good heat resistance and also a low friction coefficient. The XRN coating is designed for use in HSM of un-heat treated softer materials such as Titanium, Inconel, Stainless Steels and other gummy materials that require the use of liquid coolant.

### HSN

Millstar's new coating is a multi-layer hybrid Nano coating. This new coating has very good heat resistance and high hardness. The HSN coating is designed for use in HSM of Heat Treated materials up to 72 HRC.

### ALTiN-EXALON (TLN)

Titanium Aluminum Nitride advanced PVD coating. A special, improved ALTiN coating approaching surface hardness of CBN on a tough substrate. Recommended for tough and hard metal machining applications.

### DMD

Diamond coating. Custom coating for cutting non-ferrous, non-metallic and very abrasive materials at highly elevated speeds. Use on copper, bronze, brass, aluminum-silicon alloys, carbon graphite, solid and fiber-reinforced plastics, ceramics and composite materials.

Custom tool coatings for specific applications are available by request.

## Choosing Cutting Parameters/Calculating Cutting Speed and Feed – METRIC For Ball Nose Inserts

**Table 1 - Cutting Conditions for Using Steel Shank Holders**

Working Material	Hardness	Grade	Vc m/min	Feed fn (mm/Rev)										Ap Max	Ae Max

# Choosing Cutting Parameters/Calculating Cutting Speed and Feed – METRIC

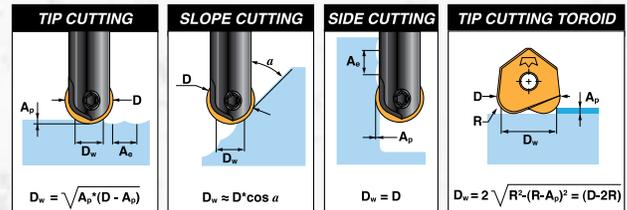

## 1. Find the Cutting Speed $V_c$ (m/min) & Feed $f_n$ (mm/r<sup>1</sup>)

Find  $V_c$  and  $f_n$  range in Table 1 or Table 2 above. Choose the average value for  $V_c$  and the lower value for feed in the range.

## 2. Compute the $D_w$

In order to compute the RPM value of the spindle it is necessary to determine the  $D_w$  which is the effective engaged tool diameter. The  $D_w$  depends on the geometry of the inserts (ball nose or toroid) and the relative position of the tool against the working piece surface.

Example calculation is of  $D_w$  is presented to the right.

## 3. Calculate Spindle Speed $N$ (n/min)

Use the formula:  $N = (V_c * 1,000) / \pi * D_w$

**Table 3 - Working Diameter For Ball Nose Tools (tip cutting)**

ØD	A <sub>p</sub>																		
	0,1	0,2	0,3	0,4	0,5	0,6	0,7	0,8	0,9	1	1,5	2	2,5	3	3,5	4	5	6	7

**Table 4 - Working Diameter For Toroid Tools (tip cutting)**

Insert Diameter "D"	10	12	16	20	25	30	32
Depth of Cut	D <sub>w</sub> Working Diameter (metric) Actual cutting diameter of toroid inserts						
0,5	7,3	9,3	11,9	14,3	17,8	20,4	21,6
1,0	8,5	10,5	13,3	16,0	19,6	22,5	23,8
2,0	9,7	11,7	14,9	18,0	22,0	25,2	26,6
3,0	10,0	12,0	15,8	19,2	23,4	27,0	28,5
4,0			16,0	19,8	24,3	28,3	29,9
5,0				20,0	24,9	29,2	30,8
6,0					25,0	29,7	31,5
8,0						30,0	32,0

## 4. Calculate the Table Feed $V_f$ (m/min)

Use the formula:  $V_f = N * f_n * K_f$ .  $K_f$  is the feed rate multiplier coefficient taking into consideration that chip load is less than theoretical value. Take the value of  $K_f$  from Table 5 or Table 6.

**Table 5 - Feed Rate Multiplier For Ball Nose Inserts**

Insert Diameter "D"	6	8	10	12	16	20	25	30	32
Depth of Cut	Feedrate Multiplier Factors (for working diameters D <sub>w</sub> )								
0,5	1,8	2,0	2,2	2,5	2,8	3,2	3,5	3,8	4,0
1,0	1,2	1,5	1,6	1,8	2,0	2,2	2,5	2,6	2,8
2,0	1,0	1,1	1,2	1,3	1,5	1,6	1,8	1,9	2,0

6,0					1,0	1,0	1,0
8,0						1,0	1,0

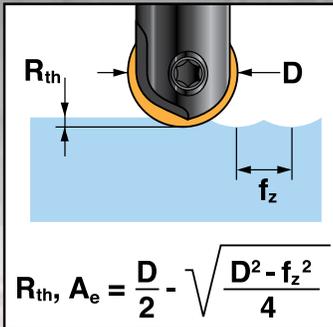

## Verify Surface Roughness ( $R_{th}$ )

1. Decreasing the  $A_e$  and feed by half will improve surface roughness by 4 times.
2. Using  $f_z = A_e$  in most cases is the best option.

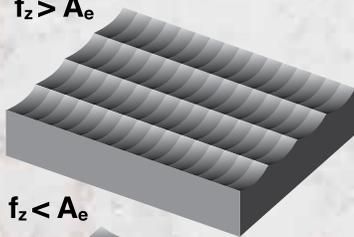

### Surface Roughness Step-Over

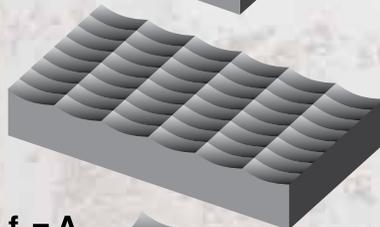

### Surface Roughness Feed Dir

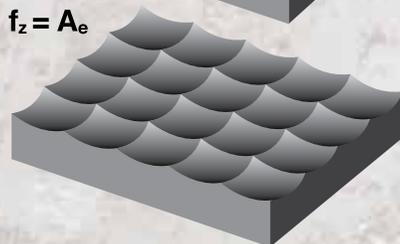

$f_z > A_e$

$f_z < A_e$

$f_z = A_e$

## Normal Cutting Parameter Recommendations for BDS, BD and FB inserts For typical mold steels (1.2311, 1.2344, 1.2711, 1.2714, etc.)

The following parameters are ONLY if cutting a flat surface with the bottom of the tool. For finish machining using only the side of the tool, use the cutting parameters for Ball Inserts.

1. Spindle speed: $n(s)$ ( $min^{-1}$ )								
FB or BD $\varnothing \Rightarrow$	6	8	10	12	16	20	25	32
Material hardness	Spindle speed $n(s)$							
< 40 HRc	8000	5600	4600	3600	2800	2250	1800	1500
40-54 HRc	7000	4900	3850	2800	2400	1960	1540	1350
55-64 HRc	6000	4200	3100	2200	1800	1500	1350	1200
2. Feed per tooth: $f_z$ (mm/tooth)								
FB or BD $\varnothing \Rightarrow$	6	8	10	12	16	20	25	32
Material hardness	Feed per tooth $f_z$							
< 40 HRc	0.15	0.15	0.2	0.25	0.3	0.35	0.35	0.4
40-54 HRc	0.15	0.15	0.2	0.25	0.3	0.35	0.35	0.4
55-64 HRc	0.1	0.12	0.15	0.20	0.25	0.25	0.25	.25
3. Cutting depth: $a_p$ (mm)								
FB or BD $\varnothing \Rightarrow$	6	8	10	12	16	20	25	32
Material hardness	Maximum Cutting depth $a_p$							
< 40 HRc	0.3	0.35	0.5	0.6	0.8	1.0	1.25	1.6
40-54 HRc	0.2	0.25	0.5	0.6	0.8	1.0	1.25	1.6
55-64 HRc	0.1	0.12	0.4	0.45	0.65	0.8	1.0	1.25
4. Maximum Cutting width / step-over: $a_e$ (mm)								
FB or BD $\varnothing \Rightarrow$	6	8	10	12	16	20	25	32
Material hardness	Cutting width $a_e$							
< 40 HRc	4	6	8	9	13	17	20	26
40-54 HRc	4	6	8	9	13	17	20	26
55-64 HRc	4	6	8	9	13	17	20	26

### Additional recommendations and conditions which make it necessary to modify normal cutting parameters

- Always use climb cutting in roughing operation.
- Enter the material with the cutter by straight ramping or helical interpolation ramping. A 2° ramp angle will achieve best results.
- When roughing a cavity level by level (Z-level) it is best to start in the center and work outward in a square, rectangular or round spiral depending on the shape of the work piece. Use climb cutting.
- Long tool body extension from the spindle or tool adapter will make it necessary to decrease the recommended parameters above:
  - If the tool body extension is 3 times the ball insert diameter or less, use the recommendations on page 1.
  - If the tool body extension is 4 times the ball insert diameter, multiply the cutting parameters by 0.9 (90 %).
  - If the tool body extension is 5 times the ball insert diameter, multiply the cutting parameters by 0.75 (75 %). Use a tapered tool body for additional strength.
  - If the tool body extension is 6 times the ball insert diameter, multiply the cutting parameters by 0.6 (60 %). Use a tapered tool body for additional strength.
  - If the tool extension is greater than 6 times the ball insert diameter, it is recommended to use a carbide tool body instead of a steel body for additional rigidity.
- If the spindle speed recommended is higher than the spindle speed available on the machine, use the highest spindle speed available. You may use the same recommended feed per tooth, cutting depth and cutting width as shown above. We do not recommend reducing the feed per tooth.

## ***Copy Milling Program Tools***

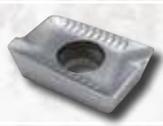

Millstar face mills are equally useful on newer high velocity machines and older slower equipment and will optimize milling performance of all your machine tools. The hardened tool bodies can be run at aggressive spindle speed and feed rates, when used with Millstar's precision ground, strong and thick, round inserts with proven hard, high performance TLN and HSN tool coatings.

The tools provide for precision finish results, minimal tool deflection and run-out. Excellent milling results can be achieved in roughing, semi finishing and fine finishing in Z-level, profiling or raster cuts, as well as in linear or circular interpolation milling or ramping.

The tools may be used with coolant, but we recommend dry, mist or MQL (minimum quantity lubrication) milling with strong air blast when high speed or hard machining steel, particularly in the higher hardness range (> 45HRc / 425 HBN).

### Cutting Conditions: Recommended Feed $f_z$ (mm/tooth)

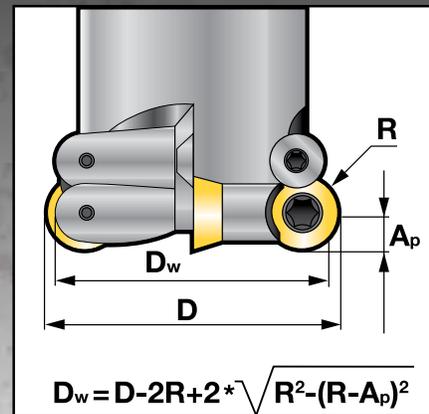

Operation	$A_p$												
	IC	0,3	0,5	0,7	0,8	1	1,2	2	3	4	5	6	8
Light	10	0,3	0,23	0,2	0,18	0,15	0	0	0	0	0	0	0
	12	0,38	0,3	0,25	0,23	0,21	0,18	0	0	0	0	0	0
	16	0,45	0,35	0,3	0,27	0,23	0,21	0,18	0	0	0	0	0
Rough	10	0	0	0	0	0,32	0,29	0,22	0,18	0,16	0,14	0	0
	12	0	0	0	0	0,42	0,38	0,3	0,28	0,24	0,20	0,18	0,16
	16	0	0	0	0	0,50	0,47	0,36	0,3	0,27	0,25	0,34	0,23

The "fz" indicated above is for an overhang of 3xD. The values are calculated based on the recommended thickness of the chip "hm".

LIGHT: Ae up to 25% of the Diameter of the Tool "D".

ROUGH: Ae up to 75% of the Diameter of the Tool "D".

In order to compute the RPM value of the spindle it is necessary to determine the  $D_w$  which is the effective engaged tool diameter. The  $D_w$  depends on the geometry of the inserts (ball nose or toroid) and of the relative position of the tool against the working piece surface. A formula is presented.

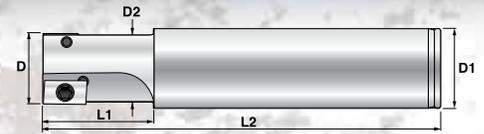

$$D_w = D - 2R + 2 * \sqrt{R^2 - (R - A_p)^2}$$

## ***High Feed Indexable Milling Program Tools***

With new five- and six-axis CNC grinding technology, Millstar has been able to create some of the most sophisticated and complex geometries in use today. With this increase in grinding technology, high-feed tooling has been reborn. The definition of high-feed geometry is producing a positive cutting edge out of a series of continuous radii with no tangent point to induce wear. The geometry must allow the chip to flow up and out of the cut quickly and smoothly. This cutting motion allows the use of heavy chip loads to achieve very high feed rates.

- For Slant Milling or Helical Interpolation decrease the recommended feed by 30%.
- In case of Helical Interpolation do not exceed the max Ap/revolution.
- For Plunging use 50% of recommended feed only.
- For insert HFCl 09T3 the max Ae is: 0.200 • For insert HFCl 1204 the max Ae is: 0.250

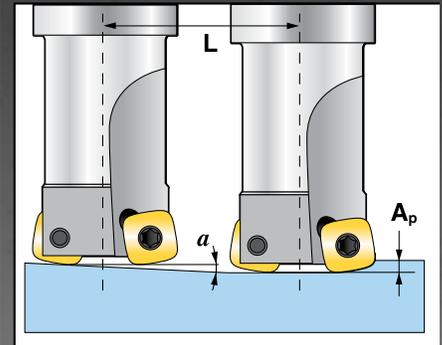

The values of "n" and "Vf" in the tables on the following pages are computed. In the application, use the closest (up side) speed from the range of the machine tool. The cutting parameters have to be adjusted accordingly to the rigidity of the machine-tool and working piece.

In case of hard steel alloy of 50-55 HRC decrease by 30% the Ap, Vc and feed.

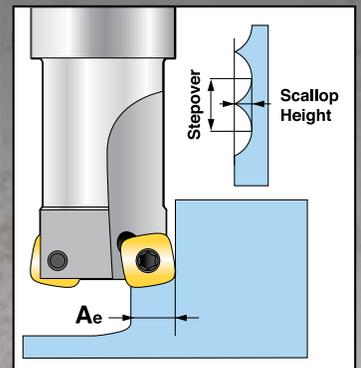

### Helical Interpolation

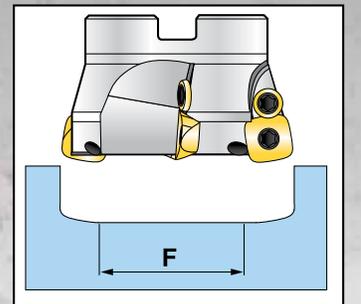

### Slant Milling

### Plunge Milling

### Facing - Max Flat

## ***High Performance Solid Carbide End Mills***

Millstar offers a wide variety of Solid Carbide End Mills that are designed for high performance machining. Our impressive lineup features a large selection of High Feed Solid Carbide End Mills that achieve the highest performance in the industry. Our End Mills can be used in a broad spectrum of materials such as hardened steels, soft steels, titanium, cobalt chrome and many more.

## ***Solid Carbide End Mills***

Millstar's new High Performance and ultra-precise solid carbide end mills were designed for high speed, high velocity and hard steel milling. Designed with specially selected premium sub-micron carbide substrate, special tool geometry and proprietary heat-defying EXALON tool coating, these tools made in the United States, and are competitively priced. Ideal choices for accurately and aggressively machining products in:

- **Mold and die making:** injection molds, glass molds, forging dies, extrusion dies.
- **Aerospace:** engine, landing gear and tail hook components, structural components, blisks, airfoil machining and forging dies, helicopter rotor components.
- **Power generating:** turbine blades and other components.
- **Medical:** hip and knee replacement joints, surgical instruments, medical device molds.
- **Automotive:** stamping dies, wheel and tire molds, ball joints, cam shaft machining, racing engine details, bumper and other injection molds, die cast dies, forging dies for crank and cam shafts, connecting rods, steering knuckles and yokes.
- **Consumer products:** molds for cake forms and baking dishes, cell phones, lawn chairs, trash cans, toys, bottles, recyclable cutlery and dishes, jewelry, golf clubs, safety helmets, computer and accessory housings.

### ***NA***

Non-coated grade.

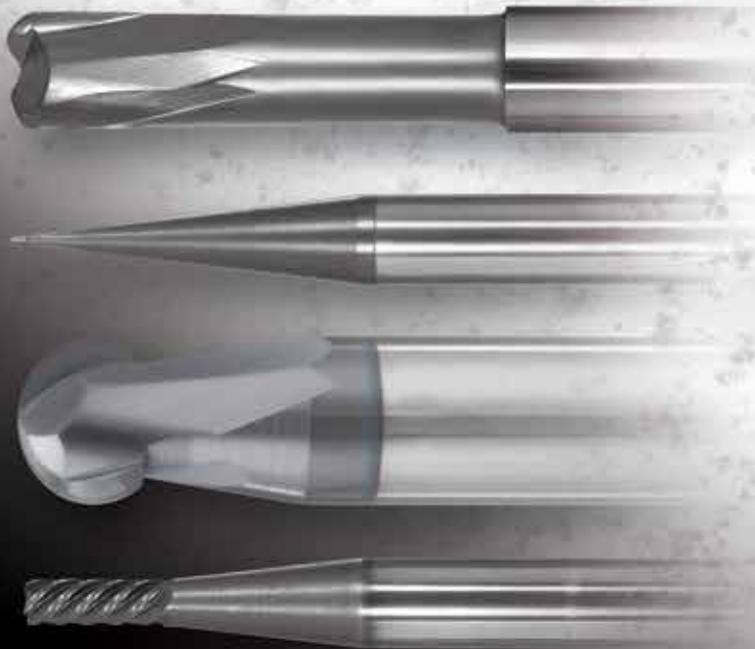

### ***HSN***

Millstar's new coating is a multi-layer hybrid Nano coating. This new coating has very good heat resistance and high hardness. The HSN coating is designed for use in HSM of Heat Treated materials up to 72 HRC.

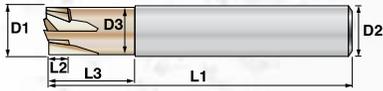

### ***ALTiN-EXALON (TLN) (EX)***

Titanium Aluminum Nitride advanced PVD coating. A special, improved ALTiN coating approaching surface hardness of CBN on a tough substrate. Recommended for tough and hard metal machining applications.

Custom tool coatings for specific applications are available by request.

## Solid Carbide End Mill Program - Ball Nose continued

Extended Reach ball nose tools Series BMNL and extended reach square nose tools Series EMR are useful tools specifically designed for long reach milling of extrusion dies, deep cavities and cores, deep rib milling and similar applications. The reduced flute length and neck diameter assure constant cutting pressure and minimal tool deflection.

### BMNL - Ball, Extended Reach Tapered Nose\*

Tool Ordering No.	Cutter Diameter (D1) tol. +0/-0.01	Corner Radius	Shank Diameter (D2)	No. of Flutes	Neck Diameter	Cutting Length (L1)	Nose Taper	Overall Length (L2)

## Solid Carbide End Mill Program - Toroid

The Toroid Series TOM with large corner radius and slight back taper is a Millstar innovative addition. It is very useful in I.D. and O.D. Z-level and spiral milling at constant tool pressure, pocket milling, and milling of pre-hard and hardened flat surfaces at higher speeds than tools with smaller or sharp corner radii.

### TOM- Toroid

Tool Ordering No.	Cutter Diameter (D1) tol. +0 / -0.01	Corner Radius	Shank Diameter (D2)	No. of Flutes	Neck Diameter	Cutting Length (L1)	Nose Taper	Overall Length (L2)

Metric	<b>HM</b>	<b>32mm</b>	<b>105</b>	<b>BT40</b>

## ***SD Collet Chucks***

CAT, BT and HSK styles:

- SD design increases gripping power/torque over the traditional ER collet system with 4° per side angle contact.
- Maximum runout (0.007mm @ 4XD) increases accuracy and tool life while minimizing rework. Consistent repeatability shortens set-up time and improves productivity.
- Off the shelf balance specifications of G6.3 at 20,000 rpm provides confidence in high speed machining applications and high accuracy requirements.
- Durable, case hardened chucks.

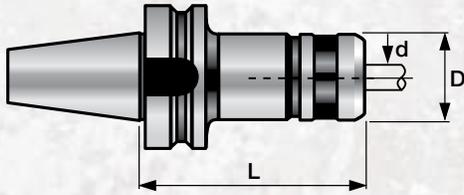

## ***HM Milling Chucks***

CAT, BT and HSK styles:

- More efficient & effective roughing operations.
- Exceptional rigidity under side loads.
- Strong chucking torque eliminates cutting tool slip and maximizes gripping power.
- Decreased vibration extends tool life and improves surface finishes for secondary operations.
- Superior concentric positioning improves accuracy and allows closer to net shape machining.
- Very competitively priced.

#### LIMITED WARRANTY

Millstar Warrants to all distributors and industrial users that the products supplied by Millstar shall be free from defects in material and workmanship.

For a period of thirty days from the date of sale, Millstar will repair or replace (at no additional cost to the customer) any standard Millstar product which Millstar determines contains defects in material or workmanship. Alternately, at its sole discretion, Millstar may credit all or part of the purchase price for such product. However, complete operating conditions and any other information requested by Millstar must accompany claims made under this Warranty. Millstar cannot issue credit or accept returns on special items.

#### EXCLUSION OF OTHER WARRANTIES AND POLICIES

There are no warranties, express or implied, which extend beyond the warranty description on the face hereof and specifically, MILLSTAR AND ITS AFFILIATED COMPANIES EXCLUDE ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Millstar and its affiliated companies shall have no liability or responsibility for any claim or loss arising out of design, manufacture, sale or use of its products other than to repair or replace its products as described above. IN NO EVENT SHALL MILLSTAR OR ITS AFFILIATED COMPANIES BE LIABLE FOR ANY SPECIAL, CONSEQUENTIAL OR INCIDENTAL DAMAGES.

Any misuse or alteration of the product will void this Warranty. Millstar does not authorize any person or entity to make any representation (verbal or written) contrary to the terms of this Limited Warranty or its exclusions.
